

!cautions

for storage and handling

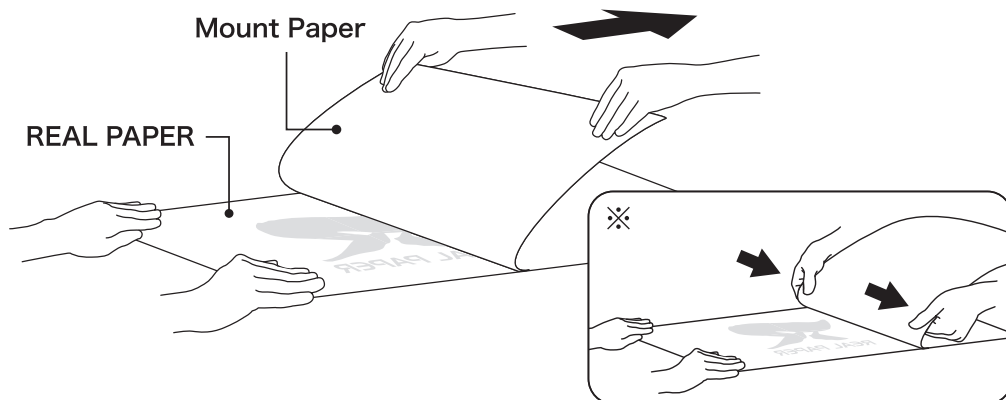

this is Not a SUSHI Roll ☺ "REAL PAPER" is an ultra thin rice paper specialized for surfboard decals.

※REAL PAPER comes with a mount paper. Please make sure to peel it off before lamination.

- ① Peel off 1 or 2 inches along the edge of the graphic side.
(Do this task carefully to prevent from tearing the REAL PAPER)

- ② Place the graphic side face down, hold the REAL PAPER and peel the mount paper off slowly and horizontally. When the print is big, do not peel it at once but reposition your hands to the mounted area(※) and continue peeling from there. ▶ <http://www.realpaper-web.com/jp/howto>

※We recommend to do this task with 2 persons when the print is big.

※If the print is big, trim the paper to the shape of the board before you peel it off.

◆CAUTION◆ Because of its specially-treated surface, REAL PAPER might absorb cigarette smoke and other harmful gases that may cause yellowing. To prevent from this, please store it properly.
